Strategies to Optimize the Supply of PPE and Equipment

Personal protective equipment (PPE) is used every day by healthcare personnel (HCP) to protect themselves, patients, and others when providing care. PPE helps protect HCP from potentially infectious patients and materials, toxic medications, and other potentially dangerous substances used in healthcare delivery.

PPE shortages are currently posing a tremendous challenge to the US healthcare system because of the COVID-19 pandemic. Healthcare facilities are having difficulty accessing the needed PPE and are having to identify alternate ways to provide patient care.

Pandemics That Changed History

In the realm of infectious diseases, a pandemic is the worst case scenario. When an epidemic spreads beyond a country’s borders, that’s when the disease officially becomes a pandemic. Communicable diseases existed during humankind’s hunter-gatherer days, but the shift to agrarian life 10,000 years ago created communities that made epidemics more possible. Malaria, tuberculosis, leprosy, influenza, smallpox and others first appeared during this period. The more civilized humans became, building cities and forging trade routes to connect with other cities, and waging wars with them, the more likely pandemics became. See a timeline below of pandemics that, in ravaging human populations, changed history.

Greetings Central Texas Chapter!

Hello, Central Texas Chapter, I have been consumed by the Corvid-19 virus! I am sure all of us are in a similar situation. This situation presents an unprecedented challenge to the Safety professional in that the hazard cannot be seen or detected in advance and the means to determine if an infection have occurred are very limited and difficult to obtain. In the last month I have been chasing the limited supplies of masks, hand sanitizer and disinfectant wipes. It has been very difficult as delivery times cannot be guaranteed and even if your order does arrive, you will find you have been shorted.

This pandemic exceeds the capacity of the U.S. Emergency Management system which designed to support a regional emergency such as a hurricane, earthquake or wildfire. In this instance, the entire nation is, or will be, on fire, indeed the entire world is on fire. As a municipal Safety officer, I have been advocating for the steps necessary for the City of Austin to maintain its ability to respond as the traditional avenues of seeking additional help will not be there and the City needs to conserve and protect our employees.

We will be having a virtual meeting this month; we will have roundtable type of format so that we can discuss our challenges as safety professionals during this pandemic. Meeting info will be posted on the webpage. I want to thank past President Jacob Zollinger for helping me during this period.

Thank you all

Mike Bewley

For the second year in a row, ChapterWISE volunteered at The University of Texas – Austin’s Girl Day event. This year, our team lead over 300+ students through our Slime Laboratory event, emphasizing experiment preparation and laboratory PPE. We had lines out the door for the entirety of the event, which would not have been possible without the help of our ChapterWISE volunteers. BIG THANK YOU to the Texas Mutual Team: Hannah Bolton, Alea Davis, Adriana Torres, Ashley Mikytuck, and Marisela Cortes, as well as Herb Santos, Joann Natarajan, and Charlie Jamison.

We look forward to coaching and inspiring students on safe practices and behaviors for years to come!
